Web Arch Lab Exam Questions:

1. Develop a web application use case to display the order history. The input to the system must be the order id and the output should be the order summary containing product id, product details, payment details and shipment details.
2. Display the list of products from the database having 25% discount
3. List the student details who have backlog from sem 1 through sem 4.
4. Implement an Use case to repeat the existing order (auto order). For example: if a patient needs a medicine which must take indefinitely until a doctor changes his prescription, the system must auto order the medicine maybe every month once, until he changes this request.
5. Print details of the drivers who have frequently violated the traffic rules
6. Log in use case
7. Search use case
8. Registration use case
9. Java script to validate the input. Input must not be left blank.
10. HTML frames
